SILVERSTONE SOLUTIONS MATCHMAKER SOFTWARE INVOLVED IN MATCHING FIRST CROSS-COUNTRY THREE-WAY KIDNEY TRANSPLANT

New Matchmaker Software Expected to Accelerate Paired Kidney Donations and Give New Hope to Many of the 70,000 People Waiting for Kidney Transplants

San Francisco, CA--April 30, 2007--Silverstone Solutions, Inc. announced today that its new software, Silverstone Matchmaker, was used by California Pacific Medical Center (CPMC – San Francisco, CA) to help match recipients and donors in a three-way kidney transplant between CPMC and The Johns Hopkins Hospital (Baltimore, MD). This marks the second kidney transplant in the past two months in which Silverstone Solutions Matchmaker was been used by CPMC and represents the very first, three-way transplant ever performed cross-country between two transplant clinics.

Silverstone Matchmaker is a advanced software application that provides doctors and clinicians with the analysis tools necessary to rapidly and accurately match living organ donors with patients who are in need of a kidney transplant. Using advanced matching and optimization algorithms, Matchmaker can perform comprehensive donor/recipient pair matches within minutes, saving transplant clinics the months of work previously required to fully assess potential pairs.

About Paired Kidney Donation

Paired Kidney Donation matches two or more incompatible donor/recipient pairs with alternate, compatible pairs. This concept has been around since the 1990s and is viewed as an innovative way to potentially reduce the number of people on the national kidney organ waitlist. However, very few actual transplants have been performed using this theory due to the large and complex calculations necessary, the complexity of shared patient information between individual clinics, and the general lack of efficient and high-quality computer software tools. More information about Paired Kidney Donation is available at http://www.silverstonesolutions.com/paired_donation.html.

About Silverstone Solutions and Matchmaker

Silverstone Solutions, an innovator in life science computing, was founded by David S. Jacobs, a successful software entrepreneur who himself is a kidney transplant recipient. Driven by his own personal experience, he designed the company's flagship product - Silverstone Matchmaker. Matchmaker was inspired by the need to more effectively utilize scarce, living donor organs and deliver them to patients in need. This shortens the length of time people spend on the deceased donor organ list, saves substantial healthcare costs relating to dialysis treatments, and ultimately helps save lives. More information about the company and its products is available at www.silverstonesolutions.com.
